SUMMARY

Full-Stack Developer with hands-on experience developing web applications using Java (Spring Boot), Node.js, and modern frontend frameworks such as Vue.js, React, and Next.js. Experienced in full Software Development Lifecycle (SDLC), including requirement analysis, system design, implementation, testing, performance optimization, and deployment. Familiar with building scalable, maintainable applications and collaborating with cross-functional teams in structured development environments.

SKILLS

Technical Skills

- Frontend: Vue.js, React.js, Next.js, JavaScript, TypeScript, HTML5, CSS3
- Backend: Node.js (Express.js), Java (Spring Boot), PHP (Laravel / CodeIgniter)
- Databases: MySQL, PostgreSQL, MongoDB (NoSQL)
- APIs & Integration: RESTful APIs, JSON, Postman, Swagger
- Tools & Platforms: Git, GitHub, GitLab, npm, Maven, AWS (basic), Linux (basic)

Development Practices

- Software Development Lifecycle (SDLC): from requirement understanding, development, testing, to deployment
- Version control and configuration management using Git (feature branching, merge requests, code review)
- Test execution: manual test scenarios, regression testing, smoke testing using Postman and web UI
- Troubleshooting and bug fixing in development and production environments
- Basic UX evaluation based on user feedback, WebView constraints, and design guidelines

WORK EXPERIENCE

Full-Stack Developer (Intern) | PT Smooets Teknologi Outsourcing

Dec 2024 – Dec 2025

- Design, develop, and maintain web application features for HR, task management, and online ordering systems using Vue/ Next.js on the frontend and Spring Boot / Express.js on the backend.
- Implement and integrate RESTful APIs, ensuring clean request/response handling, proper error management, and compatibility with multiple client applications (web and WebView).
- Collaborate with business analysts, QA engineers, and project managers to clarify requirements, refine user stories, and align technical solutions with business needs.
- Participate in the end-to-end Software Development Lifecycle (SDLC), including requirement analysis, development, test execution, bug fixing, and deployment to staging and production environments.
- Execute regression and validate API responses with Postman, and support QA in reproducing and resolving issues.

- Troubleshoot production issues by analyzing logs, debugging application flows, and implementing long-term fixes instead of temporary workarounds.
- Improve code quality through refactoring, code reviews, and better separation of concerns across controllers, services, and data access layers.
- Adjust and evaluate user interfaces based on UX guidelines and user feedback, ensuring a consistent and user-friendly experience across desktop and WebView.

PROJECTS

BagiBagi Cora – Task Management (Professional Project)

- Contributed as a Front-End developer for a task management web platform focused on improving collaboration and productivity within the organization.
- Developed responsive and interactive user interfaces using JSP, JSTL, and Bootstrap, ensuring smooth user experience across devices.
- Integrated existing backend REST APIs into the front-end, enabling real-time task updates, user activity tracking, and efficient workflow management.
- Collaborated with backend and QA teams to ensure seamless functionality, code quality, and high usability.
- Tech Stack: JSP, JSTL, Bootstrap, REST API

Pagii HR – Attendance & HR Management System

- Contributed to the development and maintenance of an HR platform for attendance, business trips, leave requests, and reimbursements in a single integrated system.
- Implemented and enhanced features across the stack using React/Next.js and Spring Boot, including form handling, validation, and API integration.
- Fixed functional bugs and optimized database queries and API logic to improve performance and reduce response time.
- Worked closely with QA and project managers to clarify edge cases, execute test scenarios, and ensure features met business and compliance requirements.
- Participated in deployment to staging and production, supporting regression testing and monitoring after release.

Pagii Chatshop – WhatsApp AI Chatbot Commerce Platform

- Developed and adjusted features for an AI-driven WhatsApp sales assistant, enabling customers to order products directly via chat.
- Integrated frontend components with existing REST APIs for order creation, invoicing, and payment flows.
- Evaluated and improved UX for WebView-based admin pages to ensure a consistent experience compared to the desktop web.
- Collaborated with cross-functional teams to troubleshoot production issues, refine business rules, and enhance system stability.
- Gained exposure to emerging technologies through AI-assisted chatbot flows and modern messaging-based commerce.

Sandbox Ordering – Online Store & POS System (Web & WebView)

- Developed frontend modules using Vue.js for order management, cart handling, and transaction overview with reusable component patterns.
- Integrated frontend with backend services built using Java (Spring Boot) and REST APIs.
- Worked on performance optimization, bug fixing, and refactoring to improve system stability and scalability.
- Collaborated with cross-functional teams to define feature specifications, prototype workflows, and align implementation with business requirements.

WasteGo – Waste Bank Web & Mobile Application (Academic Group Project)

- Designed a simple system architecture and API structure for a waste bank application that manages waste pickup requests, waste categories, and point rewards.
- Implemented backend services using Express.js and PostgreSQL, including authentication, waste submission, and pickup scheduling.
- Ensured clear API contracts and basic documentation to support potential frontend integration.
- Focused on clean separation between routing, controllers, services, and data models to improve maintainability.

EDUCATION

Politeknik Elektronika Negeri Surabaya (PENS)

Diploma III – Informatics (Distance Learning Program) – Ongoing

BOOTCAMP & TRAINING

WGS Bootcamp – Node.js & React.js

Sep 2024 – Nov 2024

- Completed an intensive full-stack program using Express.js, React, Node.js, and PostgreSQL.
- Developed a warehouse and employee management application, implementing Role-Based Access Control (RBAC) for secure, role-specific access.

SEAMEO Web Developer Training

Aug 2024 – Sep 2024

- Gained practical experience in web development using Laravel, React, and SQL.
- Built a financial management application to track and calculate income and expenses as a final project.

LICENSES & CERTIFICATIONS

- Web Developer (BNSP) – Politeknik Elektronika Negeri Surabaya (PENS), Issued Nov 2024 – Credential ID: TIK.186.00329.2024
- AWS Academy Graduate – AWS Academy Cloud Foundations, Issued Jun 2025
- Bootcamp NodeJS & ReactJS – WGS Hub, Issued Sep 2024 – Credential ID: 2202001/11/WGSID-BC/04/2024
